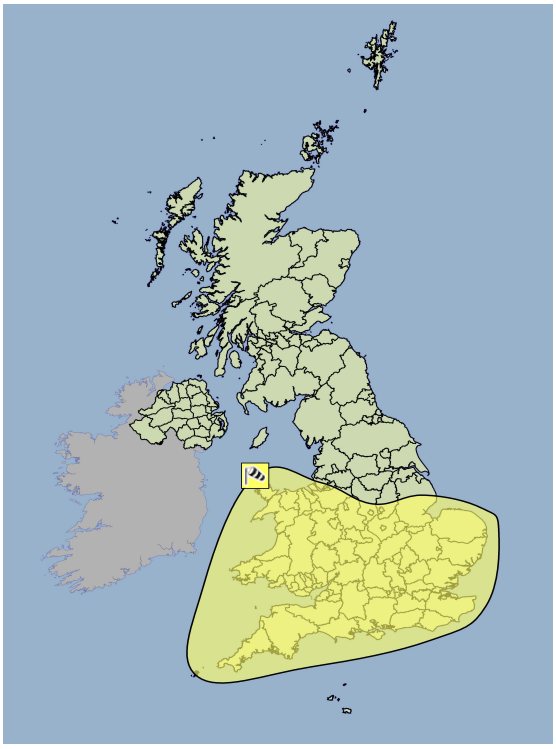
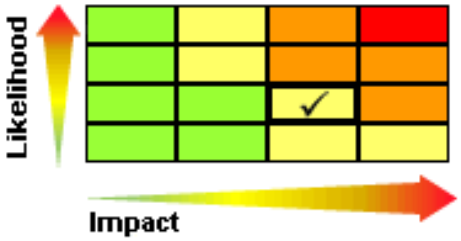
National Severe Weather Warning Service





Chief Forecasters Assessment
A deepening area of low pressure will track east across southern Ireland and then central parts of the UK during Tuesday afternoon and evening, with a swathe of very strong winds developing on the southern flank of the low. There is now increased confidence that the worst of the winds will reach West Wales late in the afternoon, sweeping rapidly eastwards across the Midlands during the evening. This update extends the warning area northwards into the north Midlands and southern parts of Northern England.

The Met Office have issued a **Yellow Warning** of **Wind**

Valid from **16:00 on Tue, 17th Nov 2015** until **23:30 on Tue, 17th Nov 2015**

West to southwesterly gales and locally severe gales are likely to sweep eastwards across the southern half of the UK later on Tuesday. Widespread gusts of 50-60 mph are likely, increasing to 60-70 mph across parts of Wales and the Midlands , and possibly reaching 70-80 mph in the most exposed spots such as on some coasts of West Wales.

Be aware of the risk of disruption to travel and that gusts of this strength could bring down trees and lead to some damage to weakened structures.
